Washington, DC 20554

FCC Chairman Powell:

As a concerned individual, I am writing to express my opposition to the Department of Justice's request that all new Internet communication services be required to have built-in wiretapping access.

I do not believe this requirement is necessary. Longstanding laws already require Internet Service Providers and Internet telephone companies to allow the FBI to conduct surveillance. The FBI is going far beyond these existing powers by trying to force the industry to actually build its systems around government eavesdropping. It is the equivalent of the government requiring all new homes be built with a peephole for law enforcement to look through.

I am very concerned that this requirement represents an end-run around Congress. Lawmakers, after extensive deliberations, set up boundaries for how the FBI can collect information between sources like phone companies and data sources like e-mail. The FBI's aggressive and expansive reading of the law would bypass the legislative process to alter that careful balance.

I understand that by requiring a master key to our personal communications, the government is creating the very real potential for hackers and thieves or even rogue government agents to access our personal communications. Past efforts to provide this sort of backdoor access have not been successful and only created a rich opportunity for hackers.

Once again, I urge you to oppose the dangerous suggestion of the Department of Justice that our new Internet communication technologies should have built-in wiretapping.

I look forward to hearing your thoughts on this matter.

Sincerely,

Ed Brooking

To be quite honest, I do not feel the government works for the people any more, we are simply here to insure the government's survival. What ever happened to of, for and by the people? It is as if we have degenerated to a large ant hill with this fat gross government queen sucking the life out of all the workers.

Doom and gloom? Actually, reality, as resources are eliminated, financial models fail, entire populations starve or are eradicated and those with the will and arms protect themselves. The fence between government and the populace is growing ever higher with each new request for increased control over freedom denial by some government entity who keeps saying "trust us" while they pick your pockets clean.

How do you really see the future? I would not be buying any advance tickets on the shuttle to Mars just yet. Does not look like our earth is going to survive man long enough to make space a viable escape alternative.

Maybe if we took away a few more citizen rights?

Help your constituents by stopping the privacy invasion. Please.

And, yes, I am a voter. I have no party loyalties as I vote for each person based on how I feel they think and act.

Dennis D. Dotson

FCC Chairman Powell:

As a concerned individual, I am writing to express my opposition to the Department of Justice's request that all new Internet communication services be required to have built-in wiretapping access.

This would be an end to freedom as we know it. It may not be much of a threat, now, but as available and affordable compute power doubles every 18 months, and the population grows at a tiny fraction of that rate, it will not be long before it will be trivial for the government to intercept and analyze every personal communication with little or no checks and balances. That's too much power and we know from history that it would eventually be abused to the detriment of all. The only thing that has a chance to stop such a state is strong legislation to preserve the freedoms, checks, and balances that our country is founded upon. The request of the justice department if implemented would be a huge step in the WRONG DIRECTION. What we really need is strong laws to clarify and apply the existing checks and balances into the Internet era and protect our freedoms and due process. Please don't let us go in the wrong direction.

At the same time, there are serious technical arguments against the proposal. But, even if the technical problems could be solved, the request is still not consistent with the spirit of our freedom and should be summarily rejected. What is it we are trying to protect, after all?

Sincerely,

William R Soley

I do not believe this requirement is necessary. Longstanding laws already require Internet Service Providers and Internet telephone companies to allow the FBI to conduct surveillance. The FBI is going far beyond these existing powers by trying to force the industry to actually build its systems around government eavesdropping. It is the equivalent of the government requiring all new homes be built with a peephole for law enforcement to look through.

I am very concerned that this requirement represents an end-run around Congress. Lawmakers, after extensive deliberations, set up boundaries for how the FBI can collect information between sources like phone companies and data sources like e-mail. The FBI's aggressive and expansive reading of the law would bypass the legislative process to alter that careful balance.

I understand that by requiring a master key to our personal communications, the government is creating the very real potential for hackers and thieves or even rogue government agents to access our personal communications. Past efforts to provide this sort of backdoor access have not been successful and only created a rich opportunity for hackers.

Once again, I urge you to oppose the dangerous suggestion of the Department of Justice that our new Internet communication technologies should have built-in wiretapping.

I look forward to hearing your thoughts on this matter.

Sincerely,

Diane Schluter
